ACCEL regulator/rectifiers are designed to be direct replacements to original equipment using stock mounting locations and OEM style connectors. These regulators/rectifiers are designed to handle higher power loads than their OEM counterparts and are recommended when upgrading a stator to a high-powered alternative. Our regulator/rectifiers are a cost effective solution to a blown OEM part and are engineered to prevent these problems from arising again.

ACCEL stators include upgraded features for better performance. Changes to winding specifications, wire size, and the number of poles that the magnet wire is wrapped around are some of the modifications we use to increase power output and reliability. Almost all of our stators provide a substantial power gain within the engine rpm ranges that it is needed most.
